Figure 1

1. Connect the blower's power to the terminal 23. Ensure the switch is closed to maintain the desired temperature.
2. Ensure that the switch is closed to maintain the desired temperature.
3. Ensure that the switch is closed to maintain the desired temperature.
4. Ensure that the switch is closed to maintain the desired temperature.
5. Ensure that the switch is closed to maintain the desired temperature.

Figure 2

1. Open the screwdriver and loosen the electrical connections. Ensure that the switch is closed to maintain the desired temperature.
2. Open the screwdriver and loosen the electrical connections. Ensure that the switch is closed to maintain the desired temperature.
3. Open the screwdriver and loosen the electrical connections. Ensure that the switch is closed to maintain the desired temperature.
4. Open the screwdriver and loosen the electrical connections. Ensure that the switch is closed to maintain the desired temperature.
5. Open the screwdriver and loosen the electrical connections. Ensure that the switch is closed to maintain the desired temperature.

Wiring Instructions

1. Strip the wires using a wire stripper. Ensure that the switch is closed to maintain the desired temperature.
2. Connect the wires using a wire connector. Ensure that the switch is closed to maintain the desired temperature.
3. Secure the wires using a wire clamp. Ensure that the switch is closed to maintain the desired temperature.
4. Secure the wires using a wire clamp. Ensure that the switch is closed to maintain the desired temperature.
5. Secure the wires using a wire clamp. Ensure that the switch is closed to maintain the desired temperature.
